

Multicam SR2515v i CNC Routing Machine

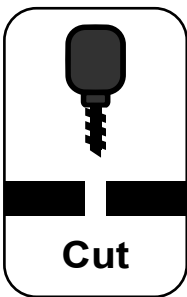

Max Material Size:
2400mm x 1200mm

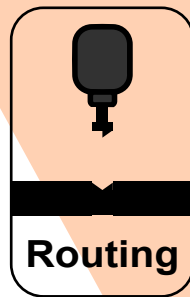

Max Material Thickness:
25mm

Material Capabilities:
Discuss with Makerspace Staff your
Material selection

Machine Capabilities:

CNC cutting is a process that uses a router bit to cut through a flat sheet of material. Typically sheet material is left with a clean edge as a result of the cutting process. CNC cutting is a fast process, and good for producing lots similar cuts or larger pieces.

Routing is a process that uses a CNC router bit to only cut/carve part way through a flat sheet of material. This process is very similar to the cutting process however it can be used to add detail's and cut grooves into the surface of the material.

Availability:
1 x Multicam CNC Routing Machine
(A consultation must be made with Makerspace
staff before submitting any CNC files)
